Portfolio

PROFILE

Cybersecurity student specializing in Security Operations Center (SOC) operations, with a focus on threat detection, incident response, and security automation. Passionate about building scalable and resilient security
infrastructures, with hands-on experience in designing and implementing real-world SOC environments. Strong
analytical mindset with a proactive approach to identifying and mitigating cyber threats.

EDUCATION

Integrated Preparatory Cycle (2 years) | Engineering Cycle (2 years, ongoing) 2022 – 2026
Esprit

Baccalaureate in Computer Science
2022

PROFESSIONAL EXPERIENCE

Corporate Immersion Internship 08/2025 – 09/2025
Technical Department – Tunisie Telecom

- Participated in the Network Operations Center (NOC): traffic monitoring and real-time incident resolution support.
- Designed and developed a customer request analytics dashboard:
- **Frontend**: React.js and Chart.js for data visualization, Excel file import, real-time filtering, and interactive charts.
- **Backend**: Integration with a Spring Boot API using Spring Data JPA and MySQL for data storage and retrieval via REST endpoints.

Observation Internship 07/2023 – 08/2023
Tunisie Telecom
Gained knowledge of network infrastructure and internal work methodologies.

SKILLS

Programming & Scripting
C++, Python, Java, PHP, JavaScript, SQL, Bash

Automation & Tools

- SOAR: TheHive, Cortex, Shuffle
- VirusTotal
- Prometheus, Grafana

Systems & Virtualization

- Linux administration
- Virtualization: VMware, VirtualBox
- Active Directory
- System monitoring: Nagios

Cybersecurity & SOC

- SIEM: Splunk, Wazuh, ELK
- Threat Detection
- Log Analysis
- Incident Response
- MITRE ATT&CK Framework Knowledge
- Threat Hunting

Networking & Security

- Firewall configuration and rule management (pfSense, iptables)
- IDS/IPS (Suricata, Snort)
- Network traffic analysis and TCP/IP protocols

CERTIFICATES & BADGES

Ethical Hacker
Cisco

Cyber Threat Management
Cisco

Blue Team Junior Analyst
Security Blue Team

Cybersecurity Fundamentals
IBM-Skills Build

Fortinet Certified Associate in Cybersecurity
Fortinet

Scientific Computing with Python
FreeCodeCamp

Certified Red Team Operations Management (CRTOM)
Red Team Leaders

Certified Phishing Prevention Specialist
Hack & Fix

LANGUAGES

Arabic
Native

English
C1 Efset

French
b1

AWARDS

First Prize — Integrated NIDS Project 06/2026
Esprit
Recipient of the First prize for the integrated network, infrastructure and Data Security project at the 13th "Bal des Projets, Esprit

PROJECTS

Banking SOC — Automated Incident Response Ecosystem | 2025–2026
- Designed and deployed a next-generation SOC for the banking sector, integrating a full threat detection stack (Wazuh, Suricata, ELK, T-Pot) with end-to-end SOAR automation (Shuffle, TheHive, Cortex), reducing MTTD by ~70% and MTTR by ~65% through automated playbooks and real-time alerting.
- Engineered a RAG-powered AI assistant capable of autonomously orchestrating response workflows and generating compliance-ready incident reports — compliant with PCI DSS, ISO 27001

Deployment and Security of a Virtual Infrastructure
- Built a hardened multi-VM environment including pfSense firewall, Suricata IDS/IPS, and Wazuh for security monitoring across Windows, Linux, and containerized environments.
- Implemented network segmentation, remote access via OpenVPN, and system hardening using SSH keys, iptables, fail2ban, and Docker security controls.
- Developed a monitoring infrastructure using Prometheus and Grafana for real-time system and security metrics visibility.

HomeLab-Soc
- Deployed a virtualized SOC across 6 VMs integrating Active Directory and pfSense distributed over 5 VLANs, with a detection stack including Suricata IDS, Sysmon, and Splunk for multi-source log correlation.
- Simulated multi-stage attacks aligned with 10 MITRE ATT&CK techniques, including reconnaissance, brute-force attacks, and credential dumping.
- Designed a SOAR pipeline using n8n triggered by Splunk webhooks for automated threat classification, IP blocking via pfSense, and real-time alerting via Discord.

nj-Recon — Network Security Reconnaissance Automation Tool (Python)
- Developed a framework integrating Nmap, WHOIS, and DNS enumeration to accelerate network reconnaissance, reducing assessment time by 70%.
- Implemented multi-threaded scanning, service detection, and automated HTML/PDF report generation with vulnerability correlation and risk categorization.

Automated Pipeline — Wazuh & Active Response with VirusTotal
- Built an automated SOC pipeline using Wazuh and the VirusTotal API to detect, analyze, and respond to threats in real time.
- Implemented File Integrity Monitoring (FIM) and active response to automatically remove malicious files, reducing manual intervention and response time.
