Anis Bengaji

Cybersecurity Engineering Student

bengaji.anis@outlook.com +216 56078498 Ghazella, Ariana Portfolio Github

Profile

Cybersecurity student seeking an end-of-studies (PFE) internship, specializing in Security Operations Center (SOC) operations, with a focus on threat detection, incident response, and security automation. Passionate about building scalable and resilient security infrastructures, with hands-on experience in designing and implementing real-world SOC environments. Strong analytical mindset with a proactive approach to identifying and mitigating cyber threats.

Education

Engineering Cycle in cybersecurity, *Esprit School of Engineering* 09/2024 – 06/2027

Integrated Preparatory Cycle, *Esprit School of Engineering* 09/2022 – 06/2024

Baccalaureate in Computer Science 2022

Professional Experience

Engineering Internship, *Esprit-Tech Cloud* 08/2026 – 09/2026

- Designed and deployed an autonomous ML-driven security system for Kubernetes, enabling real-time anomaly detection and automated threat response.
- Developed a Random Forest–based anomaly detection model achieving 95% precision and recall.
- Automated threat containment via the Kubernetes API, achieving sub-second end-to-end response time.

Corporate Immersion Internship, *TunisieTelecom-Technical department* 08/2025 – 09/2025

- Supported Network Operations Center (NOC) staff with traffic monitoring and real-time incident resolution.
- Developed a customer request analytics dashboard with React.js and Chart.js (Excel import, real-time filtering, interactive charts), backed by a Spring Boot REST API with Spring Data JPA and MySQL.

Skills

Programming & Scripting
C++, Python, Java, PHP, JavaScript, SQL, Bash

Systems & Virtualization
- Linux administration
- Virtualization: VMware, VirtualBox
- Active Directory
- System monitoring: Nagios

Networking & Security
- Firewall configuration and rule management (pfSense, iptables)
- IDS/IPS (Suricata, Snort)
- Network traffic analysis and TCP/IP protocols

Automation & Tools
- SOAR: TheHive, Cortex, Shuffle
- VirusTotal
- Prometheus, Grafana
- n8n

Cybersecurity & SOC
- SIEM: Splunk, Wazuh, ELK
- Threat Detection
- Log Analysis
- Incident Response
- MITRE ATT&CK Framework Knowledge
- Threat Hunting

Cloud Security
Azure, Microsoft Defender, Log Analytics (KQL), Prowler, ARM/IaC

Certificates & Badges

Ethical Hacker
Cisco

Cyber Threat Management
Cisco

Blue Team Junior Analyst
Security Blue Team

Cyberops associate
cisco

Fortinet Certified Associate in Cybersecurity
Fortinet

Certified Red Team Operations Management (CRTOM)
Red Team Leaders

Languages

Arabic
Native

French
B2

English
C1 Efset

Awards

First Prize — Integrated NIDS Project, *Esprit* 05/2026
Recipient of the First prize for the integrated network, infrastructure and Data Security project at the 13th "Bal des Projets, Esprit

Projects

Banking SOC — Automated Incident Response Ecosystem

- Designed and deployed a SOC for the banking sector, combining Wazuh, Suricata, ELK, and T-Pot for threat detection with Shuffle, TheHive, and Cortex for SOAR automation.
- Reduced MTTD by ~70% and MTTR by ~65% through automated playbooks and real-time alerting.
- Built a RAG-powered AI assistant that orchestrates response workflows and generates incident reports aligned with PCI DSS and ISO 27001.

Deployment and Security of a Virtual Infrastructure

- Built a hardened multi-VM environment with a pfSense firewall, Suricata IDS/IPS, and Wazuh monitoring across Windows, Linux, and containerized hosts.
- Implemented network segmentation, OpenVPN remote access, and hardening (SSH keys, iptables, fail2ban, Docker security controls).
- Built Prometheus and Grafana dashboards for real-time system and security metrics.

HomeLab-Soc

- Deployed a virtualized SOC on 6 VMs across 5 VLANs, integrating Active Directory and pfSense, with Suricata IDS, Sysmon, and Splunk for multi-source log correlation.
- Simulated multi-stage attacks mapped to 10 MITRE ATT&CK techniques (reconnaissance, brute force, credential dumping).
- Built a SOAR pipeline in n8n, triggered by Splunk webhooks, for automated threat classification, IP blocking via pfSense, and Discord alerting.

Azure Cloud SOC — Detection Engineering & Automated Response

- Built a Microsoft Sentinel SOC with 9 KQL detection rules and a correlation rule, covering various attack techniques across 6 MITRE ATT&CK tactics, all deployed as infrastructure-as-code (ARM templates).
- Cut response time from ~15 minutes to under 1 minute with event-driven playbooks (Azure Logic Apps) that auto-contain exposed storage and open network ports.
- Hardened the setup against the CIS Azure benchmark with Prowler, taking storage compliance from 6 to 18 passing checks.

Web Application Penetration Test — OWASP Juice Shop & DVWA

- Manually exploited 13 vulnerabilities across all 10 OWASP Top 10 categories (SQLi, broken access control, JWT forgery, SSRF, business logic), chaining them into full admin compromise.
- Deployed ModSecurity + OWASP CRS and confirmed each injection attack is detected and blocked; wrote a Python tool to automate recon and re-test findings.
